“Steering Financial Markets in the Sustainable Transition”
Research conference, 16-18 September 2021, online

Financial institutions and markets play a central role in causing and mitigating climate and environmental change. Environmental risks also compel central banks and supervisory authorities to revise macroprudential regulation and rethink the role of monetary policy. How can markets and regulators contribute to an economy that stays within the boundaries of nature and climate?

“Steering Financial Markets in the Sustainable Transition” is the title of the first conference organized by the research network sustainable macro and the e-axes Forum on climate change, macroeconomics and finance. Join us by submitting an abstract by June 15, 2021 or register for attending. Registrations will be possible closer to the conference. If you want to be notified about important dates, subscribe to our newsletter here.

Call for papers
You can read the full call for papers here. We invite the submission of abstracts related but not limited to the environmental dimensions of the following topics:

- Quantitative easing and asset purchases
- Collateral framework
- Targeted long-term refinancing operation
- Macro- and micro-prudential regulation
- Legal aspects of central bank mandates

**Deadline for abstracts:** 15 June 2021  
**Announcement of accepted abstracts:** 15 August 2021  
**Deadline for full paper:** 30 August 2021
